

## Burndown Chart for Sprint 3

Burndown Chart [Switch report](#) ▾

We started Sprint 3 on Feb 26 and ends on Mar 12. We planned to complete 6 user stories and completed 4 of them. 2 of them are removed to the next sprint (Sprint 4). Compared with Sprint 3, our velocity drops because one user story (P301-25) costs us a lot of time, which is related to the backend database and is one of the core features of our project.
