# Francis Miller

Age: 23

Personality: Works well with others, ambitious, adaptable, calm, understandable.

Background: Francis is a fourth-year university student and he is a teaching assistant on low-level Computer Science course. He has two younger siblings, a brother and a sister, both of whom are first year university students; his brother still isn't quite sure what he enjoys doing and is uncertain as to what career path he should pursue, his sister on the other hand has been interested in pastry making since she was young and is determined to pursue a career to become a pastry chef and own a bakery of her own.

During his free time, Francis meets up with a few friends of his whom together have created a small game workshop, in which they hope would turn into a legitimate game studio one day. Here they work on a 2D platformer game that is not dissimilar to something like the class Mario or Sonic games. They are all very passionate about the game and have put extensive effort in the design and creation of it, however, they have hit a roadblock this year and identified that they lack a particular set of skill in which they cannot complete the game without it.

Skills: Most popular programming languages including Java, JS, Python and C++, good leadership skills, a 4.0 GPA, has experience in mod creations for games such as Minecraft.

Attitude towards technology: Always up-to-date with the newest technologies, keen on possibly entering the gaming industry and has a strong focus on AI technology.

Goals when using the system: Publish new events and general announcement. Update resources and news about Computer Science. Share experience about learning.

Michael Wu

Age: 21

Personality: Talkative introvert prefers online social interactions, sympathetic, procrastinator

Background: Michael is a freshman and he is struggle with getting in a Computer Science specialist. He also is an international student share an apartment with a student on the same lecture as me. His parents are both merchants. They don't want their son to work on business things as they do so that they strongly recommend Michael to choose a different field such as Computer Science.

Michael spends his leisure time on internet for the most time. He has more friends on internet. Comparing doing outdoor activities, he prefers staying at home discussing with them about anime and video game on discord.

Skills: Basic knowledge with programming languages learning from high school like Java and Python , strong logical thinking attended a few advanced math competitions

Attitude towards technology: Attention on the newest hardware like gaming monitor, CPU, and video cards , following some tech-Youtubers.

Goals when using the system: Making friends with some native speakers to improve language skill and finding a study partner who taking same courses. Stay up to date with events hosted by the MCSS, find resources about Computer Science to learn and improve his own programming skills.
